ABSTRAK

**Hubungan Pengetahuan Dengan Prilaku Ibu Dalam Melatih *Toilet Training*
Pada Anak Usia *Toddler*(1-3 Tahun) Di Desa Malatisuka
Kecamatan Gunungtanjung**

xiii bagian awal + 86 halaman + 9 tabel +1 bagan +12 lampiran

Toilet training dikenal dengan latihan buang air besar atau kecil yaitu suatu hal yang harus dilakukan orang tua kepada anaknya, dengan latihan itu diharapkan anak mempunyai kemampuan sendiri dalam melaksanakan buang air kecil atau besar tanpa merasakan ketakutan atau kecemasan sehingga anak akan mengalami pertumbuhan dan perkembangan sesuai dengan usia. Penelitian ini bertujuan untuk mengetahui hubungan pengetahuan dengan prilaku ibu dalam melatih *toilet training* pada anak usia *todler* di Desa Malatisuka Kecamatan GunungTanjung. Jenis penelitian ini kuantitatif dengan menggunakan metode korelasional. Sampel sebanyak 65 orang diperoleh dengan teknik *purposive sampling*. Data diperoleh dengan kuesioner tertutup dan data dianalisis dengan menggunakan distribusi frekuensi dan chi square. Hasil penelitian menunjukkan pengetahuan ibu dalam melatih *toilet training* sebagian besar termasuk baik sebanyak (52.3%) dan perilaku ibu sebagian besar termasuk baik (53.8%). Hasil uji chi square diperoleh terdapat hubungan antara pengetahuan dengan perilaku ibu dalam melatih *toilet training* pada anak usia (*toddler*) dengan p value 0.002. Kesimpulan ada hubungan antara pengetahuan dengan perilaku ibu dalam melatih *toilet training* pada anak usia (*toddler*). Oleh karena itu perawat khususnya yang bertugas sebaiknya untuk melakukan penyuluhan lebih intensif sehingga akan lebih meningkatkan pengetahuan dan pemahaman ibu dalam penerapan *toilet training* pada anak usia *toddler* dalam kehidupan sehari-hari.

ABSTRACT

The Correlational between Knowledge and Mother's Behavior in Training Toilet Training in toddler-aged children (1-3 years) in Malatisuka Village, Gunungtanjung District

xiii initial section + 86 pages + 9 tables +1 chart +12 appendices

Toilet training is known as defecation or urination exercises, which is something that parents must do to their children, with the exercise it is hoped that children have their own ability to carry out urination or defecation without feeling fear or anxiety so that the child will experience growth and development according to age. This study aims to determine the relationship between knowledge and maternal behavior in training toilet training for toddler-age children in Malatisuka Village, GunungTanjung District. This type of research is quantitative by using the correlational method. A sample of 65 people was obtained by purposive sampling technique. Data were obtained by a closed questionnaire and the data were analyzed using frequency distribution and chi square. The results showed that mothers' knowledge in training toilet training was mostly good (52.3%) and mothers' behavior was mostly good (53.8%). The results of the chi square test obtained a relationship between knowledge and maternal behavior in training toilet training for children of age (toddler) with a p value of 0.002. In conclusion there is a relationship between knowledge and maternal behavior in training toilet training in children of age (toddler). Therefore, nurses, especially those on duty, should do more intensive counseling so that it will further increase the knowledge and understanding of mothers in the application of toilet training to toddler-age children in everyday life.
