**GAMBARAN TINGKAT PENGETAHUAN PENDERITA TB PARU
TENTANG PENYAKIT TUBERCULOSIS PARU DI UPTD PUSKESMAS
DTP BOJONG GAMBIR KABUPATEN TASIKMALAYA**

ABSTRAK

Xiii, 50 halaman, 7 bab, 7 tabel, 6 lampiran

Tuberculosis paru (TB paru) merupakan salah satu penyakit infeksi yang prevalensinya paling tinggi di dunia. Pengetahuan penderita dan keluarga TB paru sangat penting. Dalam pelayanan kesehatan tidak terlepas dari keterlibatan penderita sebagai pasien TB paru. Pengetahuan pasien berperan pasien dalam mencegah penularan penyakit TB paru. Tujuan penelitian untuk mengetahui gambaran tingkat pengetahuan penderita TB paru tentang penyakit tuberculosis paru di UPTD Puskesmas DTP Bojong Gambir Kabupaten Tasikmalaya. Penelitian ini menggunakan metode *deskriptif*. Metode sampling *total sampling* sebanyak 30 orang. Pengumpulan data menggunakan kuesioner. Hasil penelitian didapatkan rata-rata pengetahuan 45,72 (CI 95% : 41,88 - 49,55) dengan standar deviasi 10,26. nilai terendah 29 dan nilai adalah 69. Pengetahuan kategori kurang sebanyak 24 responden (80%) dan kategori cukup sebanyak 6 responden (20%). Berdasarkan hasil tersebut diharapkan pusesmas untuk meningkatkan pelayanan kesehatan khususnya melakukan pendidikan kesehatan dengan menggunakan alat bantu pendidikan seperti *leaflet*, *booklet* dan sebagainya yang berhubungan dengan penyakit TB paru sehingga pasien dan keluarga dapat memahami mengenai penyakit TB paru.

**DESCRIPTION OF KNOWLEDGE OF TB PATIENT SUBSTANCE ABOUT
DISEASE TUBERCULOSIS PARENT AT PUBLIC HEALTH CENTRE
BOJONG GAMBIR TASIKMALAYA**

ABSTRACT

Xiii, 50 pages, 7 chapters, 7 tables, 6 attachments

Pulmonary tuberculosis (pulmonary TB) is one of the most prevalent infectious diseases in the world. The knowledge of patients and families of pulmonary TB is very important. In the health service is inseparable from the involvement of patients as patients with pulmonary TB. The patient's knowledge plays a role in preventing the transmission of pulmonary TB disease. The purpose of the study to determine the description of the level of knowledge of pulmonary tuberculosis patients about pulmonary tuberculosis in public health centre Bojong Gambir Tasikmalaya. This research uses descriptive method. Mertode sampling total sampling counted 30 people. Data collection using questionnaires. The result of the research was the average knowledge of 45,72 (95% CI: 41,88 - 49,55) with standard deviation of 10,26. the lowest score is 29 and the value is 69. The category knowledge is less than 24 respondents (80%) and enough category as much as 6 respondents (20%) Based on the result, it is expected the health center to improve the health service especially the health education by using educational tools such as leaflet, booklets and so on that are associated with pulmonary TB disease so that patients and families can understand about pulmonary TB disease.
