**PERSEPSI MASYARAKAT TENTANG PROGRAM PENGELOLAAN  
PENYAKIT KRONIS (PROLANIS) DI WILAYAH KERJA PUSKESMAS  
CIKATOMAS KABUPATEN TASIKMALAYA**

xii bagian awal + 46 halaman + 3 tabel +1 bagan +10 lampiran

Prolanis merupakan salah satu program pemerintah dalam upaya penanganan penyakit degeneratif. Cakupan Prolanis di Puskesmas Cikatomas masih kurang, hal ini disebabkan karena persepsi masyarakat terhadap Prolanis tersebut masih rendah. Kasus hipertensi mencapai 112 kasus, sebanyak hanya 19 orang peserta aktif Prolanis. Penderita diabetes mencapai 82 orang, sebanyak 6 orang mengikuti program Prolanis. Persepsi yang baik tentang Prolanis dapat mendorong penderita penyakit kronis mencapai kualitas hidup optimal. Penelitian ini bertujuan untuk mengetahui persepsi masyarakat terhadap program pengelolaan penyakit Kronis (Prolanis). Jenis penelitian ini kuantitatif dengan menggunakan metode deskriptif. Populasi adalah penderita penyakit kronis, sampel sebanyak 47 orang yang diperoleh dengan teknik purposive sampling. Data diperoleh dengan menggunakan kuesioner tertutup dan data dianalisis dengan menggunakan distribusi frekuensi. Hasil penelitian menunjukkan rata-rata skor persepsi responden rata-rata 85.47 dengan standar deviasi 8.95. Pengkategorian sebagian responden memiliki persepsi terhadap prolanis sebagian besar termasuk kategori positif (59.6%). Oleh karena itu perawat sebaiknya meningkatkan pelayanan keperawatan melalui pendidikan kesehatan sehingga dapat memperbaiki persepsi terhadap program prolanis.

**ABSTRACT**

*THE PERCEPTION OF COMMUNITY ON THE PROGRAM OF CHRONIC (PROLANIS) DISEASE MANAGEMENT IN WORKING CENTER PUSKESMAS CIKATOMAS TASIKMALAYA DISTRICT*

*Xii initial section + 46 pages + 3 tables +1 chart +10 attachments*

*Prolanis is one of the Government's program in an effort of handling a degenerative disease. Prolanis coverage in the health Cikatomas is still lacking, this is because the public perception towards Prolanis is still low. The case of hypertension reaches 112 cases, a total of only 19 people active participants Prolanis. Diabetics reach 82 people, as many as 6 people follow the program Prolanis. The perception of Prolanis can encourage chronic disease sufferers reaching optimal quality of life. This research aims to know the perception of society against Chronic disease management programs (Prolanis). Type of this research is quantitative descriptive methods. The population was sufferers of chronic disease, sample as many as 47 people who obtained by purposive sampling technique. Data obtained by using the closed questionnaire and the data were analyzed by using frequency distribution. Results of the study showed the average score the perception of respondents average standard deviation with 85.47 8.95. This portion of the respondents have the perception against the prolanis most of the categories include positive (59.6%).Therefore, the nurse should improve services through nursing health education so that it can correct the perception against the program prolanis*
