**GAMBARAN PENGETAHUAN SUAMI TENTANG KONTRASEPSI PRIA
DI DESA CIMINDI KECAMATAN CIGUGUR KABUPATEN
PANGANDARAN 2017**

xii bagian awal + 42 halaman + 4 tabel +1 bagan + 9 lampiran

Cakupan kontrasepsi untuk pria masih rendah dibanding penggunaan KB lain. Banyak faktor yang menyebabkan rendahnya partisipasi pria dalam keluarga berencana salah satu diantaranya adalah pengetahuan. Cakupan kontrasepsi pria di di Desa Cimindi akseptor Metode Operasi Pria (MOP) sebanyak 2 orang dari 324 akseptor, data tersebut menunjukkan bahwa peran serta pria dalam kontrasepsi di Desa Cimindi lebih rendah bila dibandingkan dengan Desa lain. Penelitian ini bertujuan untuk mengetahui pengetahuan suami tentang kontrasepsi pria di Desa Cimindi Kecamatan Cigugur Pangandaran tahun 2017. Jenis penelitian ini kuantitatif dengan menggunakan metode deskriptif. Populasi adalah suami PUS, teknik pengambilan sampel menggunakan *proportional random sampling* diperoleh jumlah sebanyak 95 orang. Data dikumpulkan dnegan menggunakan kueisoner kemudian dianalisis menggunakan distribusi frekuensi.

Hasil penelitian menunjukan menunjukkan skor pengetahuan suami tentang kontrasepsi pria paling rendah adalah 14 dan paling tinggi 29, berdasarkan nilai median maka pengetahuan suami tentang kontrasepsi pria sebagian besar termasuk kurang (56.8%). Kesimpulan dari penelitian ini pengetahuan suami tentang kontrasepsi pria sebagian besar termasuk kurang. Oleh karena itu masyarakat khususnya PUS agar meningkatkan pengetahuan program KB melalui ke petugas kesehatan atau mengikuti penyuluhan, bimbingan dan konseling yang akhirnya dapat berperan serta dalam program KB melalui penggunaan kontrasepsi.

ABSTRACT

*THE DESCRIPTIVE OF KNOWLEDGE ABOUT CONTRACEPTION OF MEN
IN CIMINDI VILLAGE DISTRICT CIGUGUR DISTRICT PANGANDARAN 2017*

xii first page + 42 pages + 4 tables +1 chart + 10 attachments

Contraceptive coverage for men is still low compared to other family planning. Many factors that cause low men's participation in family planning one of them is knowledge. Coverage of male contraception at in Cimindi Village, the acceptor of Male Operation Method (MOP) was 2 people (0.62%) of the 324 acceptors, the data showed that the participation of men in contraceptives in Cimindi Village was lower compared to other villages. This study aims to determine the husband's knowledge about male contraception in the Village Cimindi Cigugur Pangandaran District in 2017. This type of research is quantitative by using descriptive method. Population is the husband of EFA, the sampling technique using proportional random sampling is obtained amount of 95 people. The results showed that the scores of husband knowledge about the lowest male contraception was 14 and the highest was 29, based on the median value, the husbands' knowledge about male contraception mostly included less (56.8%). The conclusions of this study of husbands' knowledge of male contraceptives are mostly lacking. Therefore, the community especially EFA to increase knowledge of family planning program through participation in Posyandu activities or other activities such as counseling, guidance and counseling that eventually can participate in the family planning program through the use of contraception.

Keywords: Knowledge, male contraception
