**GAMBARAN SANITASI LINGKUNGAN RUMAH PADA KELUARGA
YANG MEMPUNYAI BALITA DI DESA CIDUGALEUN CIGALONTANG
KABUPATEN TASIKMALAYA**

ABSTRAK

xii bagian awal + 81 halaman + 10 tabel + 2 bagan +11 lampiran

Masalah sanitasi masih menghantui masyarakat Indonesia, salah satunya adalah sanitasi di kawasan pemukiman. Masih ada pengembang perumahan yang terkadang mengabaikan pentingnya sanitasi lingkungan. Penelitian ini bertujuan untuk mengetahui gambaran mengenai sanitasi lingkungan rumah pada keluarga yang mempunyai balita di Desa Cidugaleun Cigalontang kabupaten Tasikmalaya di tahun 2022. Jenis penelitian kuantitatif dengan menggunakan metode deskriptif kuantitatif. Sampel sebanyak 86 yang diperoleh dengan teknik *purposive sampling*. Data diperoleh dengan format observasi dan data dianalisis dengan menggunakan distribusi frekuensi. Hasil penelitian menunjukkan penyediaan air bersih termasuk memenuhi syarat (73.3%), kondisi jamban memenuhi syarat (66,3%), sarana pembuangan sampah termasuk memenuhi syarat (62.8%) dan sarana pembuangan limbah termasuk memenuhi syarat (62.8%). Kesimpulan dari penelitian ini adalah sanitasi lingkungan rumah keluarga di Desa Cidugaleun Cigalontang memenuhi syarat. Oleh karena itu diharapkan petugas kesehatan untuk melakukan penyuluhan kesehatan tentang Perilaku Hidup Bersih dan Sehat (PHBS), sehingga dapat meningkatkan perilaku sanitasi lingkungan yang baik untuk mencegah terjadinya penyakit pada balita

***AN OVERVIEW OF THE SANITATION OF THE HOME ENVIRONMENT
IN FAMILIES WHO HAVE TODDLERS IN CIDUGALEUN
CIGALONTANG VILLAGE, TASIKMALAYA REGENCY***

ABSTRACT

xii initial section + 81 pages + 10 tables + 2 charts + 11 attachments

Sanitation problems still haunt the people of Indonesia, one of which is sanitation in residential areas. There are still housing developers who sometimes ignore the importance of environmental sanitation. This study aims to find out an overview of home environmental sanitation in families who have toddlers in Cidugaleun Cigalontang Village, Tasikmalaya regency in 2022. Types of quantitative research using quantitative descriptive methods. A total of 86 samples were obtained by purposive sampling technique. Data were obtained by observation format and data were analyzed using frequency distributions. The results showed that the provision of clean water included meet the requirements (73.3%), the condition of the latrines was qualified (66.3%), waste disposal facilities were among the requirements (62.8%) and waste disposal facilities were among the requirements (62.8%). The conclusion of this study is that the sanitation of the family home environment in Cidugaleun Cigalontang Village is qualified. Therefore, it is expected for health workers to conduct health counseling on Clean and Healthy Living Behavior (PHBS), so as to improve good environmental sanitation behavior to prevent disease in toddlers..
