**Pengaruh Pendidikan Kesehatan Terhadap Perilaku Pencegahan Skabies Di  
Pondok Pesantren Nurul Amanah Neglasari Kec. Salawu Kab. Tasikmalaya**

**Abstrak**

xvi + 61 halaman + 1 bagan + 7 tabel + 7 lampiran

Penyakit scabies di Kabupaten Tasikmalaya memiliki peringkat ke 8 dari 10 penyakit terbanyak. Di Kabupaten Tasikmalaya tercatat kecacatan tingkat 2 tertinggi di Jawa Barat. Pendidikan kesehatan adalah salah satu upaya preventif untuk pencegahan guna menekan angka kesakitan dan kematian. Tujuan penelitian ini adalah untuk menganalisis pengaruh pendidikan kesehatan terhadap perilaku pencegahan scabies. Desain penelitian ini *quasi eksperimen* dengan *pretest posttest control group* dengan populasi seluruh santri dan santriwati berjumlah 98 responden dengan *total sampling*. Instrumen penelitian berupa kuesioner. Alat analisis data menggunakan *independent t test* dan *paired t test*. Hasil penelitian pada kelompok kontrol *pretest* = 36,33 dan *posttest* = 48,10. Hasil penelitian pada kelompok eksperimen *pretest* = 45,22 dan *posttest* = 50,80. Hasil uji t dependen eksperimen didapatkan nilai  $t_{hitung}$  5,548 ( $p = 000$ ) pada taraf signifikan ( $\alpha = 0,05$ ). Hasil uji t dependen kontrol didapatkan nilai  $t_{hitung}$  14,074 ( $p = 000$ ) pada taraf signifikan ( $\alpha = 0,05$ ). Hasil uji t independent kelompok control dan kelompok eksperimen didapatkan nilai  $t_{hitung}$  4,363 ( $p = 000$ ) pada taraf signifikan ( $\alpha = 0,05$ ) sehingga  $H_0$  diterima. Saran untuk puskesmas Salawu khususnya pemegang program promosi kesehatan agar melakukan penyuluhan kesehatan tentang kesehatan santri dan santriwati.

***Influence Of Health Education On Prevention Of Scabies Behavior Towards  
Boarding Schools Nurul Amanah Neglasari Kec. Salawu Kab. Tasikmalaya***

***Abstract***

*xvi + 61 pages + 1 chart + 7 tables + 7 attachments*

*Scabies in Tasikmalaya Regency is ranked 8th out of 10 most diseases. In Tasikmalaya District the highest level 2 disability was recorded in West Java. Health education is one of the preventive efforts for prevention in order to reduce morbidity and mortality. The purpose of this study was to analyze the effect of health education on scabies prevention behavior. The design of this study was quasi-experimental with pretest posttest control group with a total population of 98 female and female respondents with a total sampling. The research instrument was in the form of a questionnaire. The data analysis tool uses independent t test and paired t test. The results of the study in the control group were pretest = 36.33 and posttest = 48.10. The results of the study in the experimental group pretest = 45.22 and posttest = 50.80. The experimental dependent t test results obtained tcount of 5.548 ( $p = 000$ ) at a significant level ( $\alpha = 0.05$ ). The result of the dependent t test was obtained tcount 14.074 ( $p = 000$ ) at a significant level ( $\alpha = 0.05$ ). The results of the t-test independent of the control group and the experimental group obtained tcount of 4.363 ( $p = 000$ ) at a significant level ( $\alpha = 0.05$ ) so that  $H_a$  was accepte. Suggestion for puskesmas Salawu especially health promotion program holders to conduct health education on the health of santi and santriwati.*
